- Ensure designs meet WCAG 2.1 Level AA standards for accessibility.
- Maintain sufficient color contrast and ensure important content is visible.
- Use conventional design patterns, minimize choices, and create clear visual hierarchy.
- Align text and icons consistently and group related elements visually.
- Keep related actions close and minimize interaction costs for usability.
- Ensure consistency in styles for similar elements across the product.
- Highlight key elements using size, color, and depth to establish hierarchy.
- Utilize a 12-column grid for layout and alignment consistency.
- Avoid pure black, opting for dark greys to reduce eye strain.
- Match photo color temperature to the design palette for cohesion.
- Design interfaces to handle edge cases and long data gracefully.
- Prioritize smaller screens in responsive designs for simplicity.
- Use progressive disclosure to reveal complex information incrementally.

Services

What can I do?

Web Design

Designed responsive web applications using HTML,CSS and JavaScript,
increasing user satisfaction.

Web Development

Developed responsive web applications using HTML,CSS and JavaScript,
increasing user satisfaction.

Responsive Design

Optimized website performance by identifiying and refactoring inefficient code.

Branding Identity

Managed the software development life-cycle for a major project, ensuring timely delivery and meeting all project milestones.

Creative Design

Developed a personal portfolio website and design expertise

Support

Collaborated with a team of designers and back-end developers to create a customer-facing web application.

Projects

Netflix-Clone

A web application replicating Netflix's interface, developed using React and The Movie Database (TMDb) API for fetching movie data.
The project demonstrates skills in React, API integration, and responsive design.

Amazon-Clone

An e-commerce website clone of Amazon, built using React, Stripe for payment integration, Firebase for back-end services, and REST API for image handling.
